Investment Decision Simulator

Navigate challenging scenarios and see how biases affect your decisions

Scenario 1: The Market Crash

Loss Aversion Test

Situation: The market has dropped 30% in a month. Your portfolio is down $15,000. Headlines are screaming about recession. Everyone seems to be selling.
Your Portfolio: $50,000 → $35,000

What do you do?

Sell everything and move to cash until things calm down

Hold your current positions and stick to your plan

Buy more stocks while they're cheap (rebalance)

Scenario 2: The Hot Stock

Herd Mentality Test

Situation: TechHype Inc. has tripled in the past month. It's all over social media. Your coworkers are bragging about their gains. FOMO is real.
Your Portfolio: Considering: $5,000 investment

What do you do?

Buy now before you miss out completely

Research the company's financials before deciding

Buy a small amount so you don't miss out entirely

Scenario 3: The Confirmation Trap

Situation: You bought EcoGreen at $50, confident in your analysis. It's now at $35. You find an article saying it's undervalued, but also see reports about serious competitive threats.
Your Portfolio: $5,000 → $3,500

What do you do?

The bullish article confirms your thesis - hold or buy more

Thoroughly analyze both the bullish and bearish cases

The loss proves you were wrong - sell everything
